Introducing our Cloud based complete Wind Farm Management solution for IPP, EPC, Individual wind farm owners and O&M team to monitor, benchmark and curtail losses.

Our solution monitors:

Turbine parameters
Local Weather and Wind data
Downstream energy parameters
Vendor agnostic data acquisition

Features:

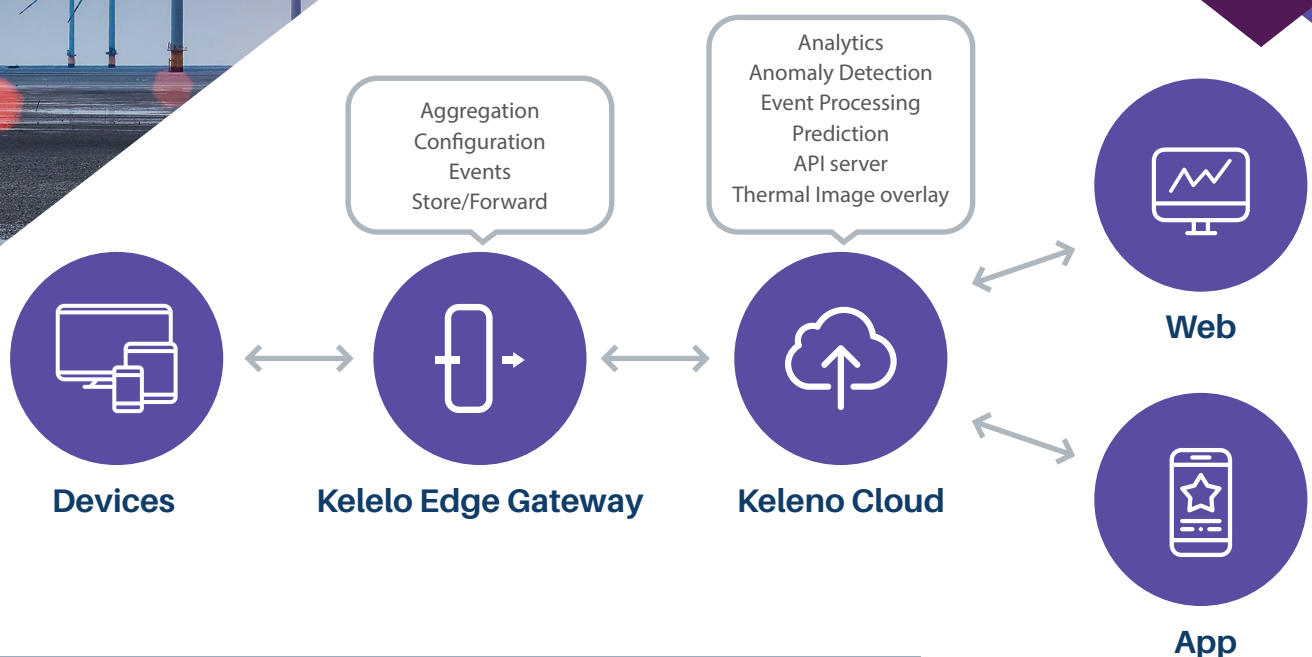

Turbine benchmarking based on the power curve of each turbine.
Identifying lowest performing turbines /sections.
Drilling down to possible root causes.

Predict and forecast day ahead generation.
High resolution data capture and aggregation for anomaly detection.
Individual turbine forecasting.
Maintenance data logging.
Portfolio monitoring.

Different front ends for different users from enterprise dashboards of revenue to individual turbine details in a hierarchical view.

Features Sets:

- Complete Portfolio monitoring for global overview using single software.
- Alarms and alerts on underperformance or breakdown.
- Automated reports.
- Benchmarking of turbines/wind farms based on actual data and power curve.
- Easy to understand dashboard for different user groups.
- Energy generation forecast.
- Calculation of contractual vs actual generation.
- Detailed split of downtimes.
